

# Transdisciplinary Research In Action

## Topic

How do we carry out effective transdisciplinary research projects with Southern partners? What kinds of challenges await us?

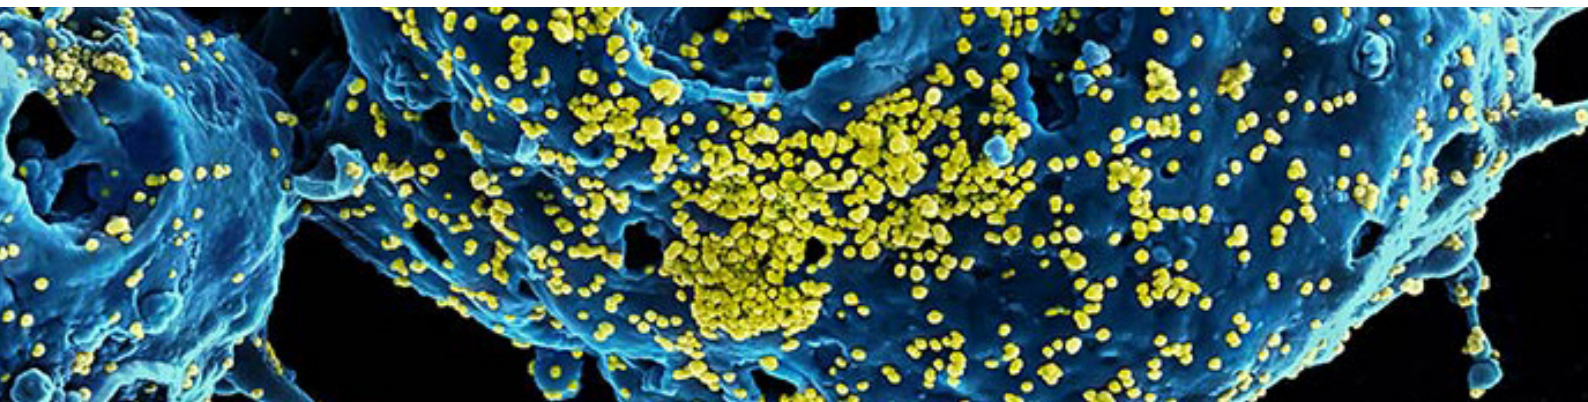

The 1-day graduate workshop offers students and researchers interested in transdisciplinarity the opportunity to learn from the experiences of a multi-year international, transdisciplinary research project on zoonotic diseases in Guatemala involving partners from academia, public administration and civil society. The overall project aims to promote a transdisciplinary 'One Health' approach for developing a novel and culturally appropriate surveillance and response program for zoonotic diseases in Guatemala.

Are you a graduate/postgraduate student planning on carrying out research in Southern contexts?

The workshop invites graduate students and researchers in both the social and natural sciences to present their transdisciplinary research, to solicit commentaries and to engage in discussions that will assist their further development.

## Objectives

This workshop offers graduate and postgraduate students and researchers the opportunity to engage with and learn from a current international project in transdisciplinary research. The Guatemala case study will provide the basis for engaging the objectives, design and results of transdisciplinary research approaches more broadly.

**Date & Venue:**  
02.05.2019  
Rheinsprung 21, Room 00.002

**Speaker:** Monica Berger  
**Commentators:** Brigit Obrist, Piet van Eeuwijk,  
James Merron and Alexandra Hofmänner
